PROFESSIONAL SUMMARY

Software Engineer with 2+ years designing and developing scalable, enterprise-grade solutions in Java, Spring Boot, and Microservices on SAP BTP Cloud Foundry, backed by SAP HANA and PostgreSQL. Hands-on with architecture, design, and development of cloud-based distributed systems — REST APIs, concurrency-safe scheduled execution, OAuth2/XSUA — applying OOP, data structures/algorithms, and GoF design patterns to build testable, maintainable, extensible backend code. Experienced with relational and NoSQL databases, CI/CD, Kubernetes, JUnit-based testing (95%+ coverage), and SAST-driven security remediation.

TECHNICAL SKILLS

Languages: Java, TypeScript/JavaScript, Python, SQL

Backend & Frameworks: Spring Boot (MVC, WebFlux, Data JPA, Security, OAuth2/XSUA), REST APIs, SSE, Node.js/Express

Architecture & Design: Microservices, cloud-based distributed systems, OOP, data structures & algorithms, GoF patterns (Strategy, Repository, Registry), concurrency (virtual threads, CompletableFuture, semaphores), Kafka, cron scheduling

Databases: Relational — SAP HANA (JPA + JDBC), PostgreSQL/Supabase; NoSQL — MongoDB, Neo4j

Cloud & DevOps: Kubernetes, SAP BTP Cloud Foundry, Docker, GitHub Actions, CI/CD (Piper, ArgoCD), SonarQube, CodeQL

Testing & Quality: JUnit, JaCoCo, PiTest & Stryker (mutation testing), integration testing, code review

Security & Networking: OAuth2/JWT, mTLS, XSUA, CSRF/CSP hardening, HTTP/HTTPS, HTTP/2, load balancing, JVM internals

PROFESSIONAL EXPERIENCE

SAP Labs India — Bangalore

Jan 2026 – Present

Software Engineer (Scholar@SAP) · i-ScOper 3.0, STE — S/4HANA Test Engineering

- Sole end-to-end owner of a Java / Spring Boot scheduling microservice on SAP BTP Cloud Foundry, delivering execution scheduling, retry, reporting, and a 21-endpoint REST API within a 9-service S/4HANA test-orchestration platform.
- Refactored the entire backend to a modern Java 21 / Spring Boot architecture — decomposing god-classes into layered packages behind Open/Closed Strategy SPIs and eliminating an N+1 query ($O(n) \rightarrow O(1)$), behavior-preserving with full test coverage.
- Built a crash-safe, idempotent cron execution engine with two-layer concurrency control (in-JVM guard + atomic DB-level claim with stale-claim reaper) and custom scheduling configuration exposed through the REST API.
- Built and rolled out 24 CI/CD pipelines from scratch across 23 repos — a standardized CI + Cloud Foundry CD model with CodeQL SAST and secret scanning — templated estate-wide from the golden pipeline on the service owned.
- Drove backend quality to 95%+ code coverage (JaCoCo), resolved 269 static-analysis issues with zero logic change, and remediated 23 security findings plus CodeQL rounds — reviewing designs and code across the team.

SAP Labs India — Bangalore

Jun 2025 – Dec 2025

Software Engineer (Scholar@SAP) · NG-DCI, Cloud ALM

- Shipped a full-stack “Mass Excel Upload” feature bulk-onboarding master data into SAP HANA via a JWT/XSUA-gated REST endpoint with a batch-insert path and graceful per-row degradation, driven to full statement/branch coverage.
- Refactored a Kafka consumer stack into a shared base-consumer class with a decompression resilience fix that still survives in production; authored health endpoints and drove consumer coverage to 95%+ behind mutation-testing gates.

SAP Labs India — Bangalore

Aug 2024 – May 2025

Software Engineer (Scholar@SAP) · i-ScOper 3.0, STE

- Sole architect and author of a flagship 6-step guided wizard, collapsing a manual multi-screen workflow into one flow — consuming on-premise OData V2/REST services through a cloud-connector + BTP-destination layer.
- Built a deployment-aware OAuth2 client-credentials auth layer against XSUA with expiry-checked token caching so identical code runs locally and on Cloud Foundry; led a DRY refactor into parameterized generics.

Enord.co — Remote

Aug 2023 – Nov 2023

Software Engineer Intern

- Built and integrated backend REST services and data-handling features, applying OOP and clean coding practices in a remote cross-functional team.

KEY PROJECTS

- Scope Comparator (Java, Spring Boot, React/TS, SSE) — SSE endpoint fans one request out to 5 concurrent upstream calls on Java 21 virtual threads with per-call failure isolation; backed by a cached XSUA token service and a raw-JDBC HANA layer.
- Project Management Suite (Node.js/Express, Supabase/PostgreSQL, React/TS) — 118+ REST endpoints across 17 modules with OpenAPI docs, plus a MongoDB → Supabase re-platform with 15 SQL migrations and row-level security.

EDUCATION

BITS Pilani (WILP) — M.Tech, Software Engineering · CGPA 7.85 · 2024–Present | IITM (GGSIPU), Delhi — BCA · CGPA 9.16 · 2021–2024

ACHIEVEMENTS

SAP Peer-to-Peer Recognition Award (monetary), Dec 2024 · NPTEL STAR Learner (3 courses) · 1st place, Film Making (3 yrs running)
