## PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of experience at SAP Labs building enterprise cloud applications and AI-powered platforms for S/4HANA delivery. Expertise in Java (Spring Boot), JavaScript (Node.js, SAP UI5), Python, RAG systems, LLM integration, vector databases, and end-to-end CI/CD automation. Proven ability to own complex features from architecture to production, consistently delivering measurable improvements in quality, performance, and developer productivity.

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                         |
